

# Integrated Management Systems - opis przedmiotu

## Informacje ogólne

Nazwa przedmiotu	Integrated Management Systems
Kod przedmiotu	06.9-WM-ZiIP-ANG-D-03_17
Wydział	<u>Wydział Mechaniczny</u>
Kierunek	Management and Production Engineering
Profil	ogółnoakademicki
Rodzaj studiów	drugiego stopnia z tyt. magistra inżyniera
Semestr rozpoczęcia	semestr zimowy 2018/2019

## Informacje o przedmiocie

Semestr	1
Liczba punktów ECTS do zdobycia	3
Typ przedmiotu	obowiązkowy
Język nauczania	angielski
Syllabus opracował	• dr hab. inż. Sławomir Kłos, prof. UZ

## Formy zajęć

Forma zajęć	Liczba godzin w semestrze (stacjonarne)	Liczba godzin w tygodniu (stacjonarne)	Liczba godzin w semestrze (niestacjonarne)	Liczba godzin w tygodniu (niestacjonarne)	Forma zaliczenia
Wykład	15	1	-	-	Egzamin
Projekt	15	1	-	-	Zaliczenie na ocenę

## Cel przedmiotu

The main effect of instruction is learning of the functionality of integrated management systems, learning of a process approach to management of manufacturing companies where such systems have been implemented.

## Wymagania wstępne

Production and Services Management.

## Zakres tematyczny

**The content of the lecture includes the following issues:** Development and classification of integrated management systems. Transactional systems and decision support systems. A complex system vs. integrated system. Module approach to the complex system. Assessment of ERP-class systems. Material Requirements Planning MRP and Manufacturing Resource Planning MRPII. MRP and MRP II specifications. Basic functions of the integrated enterprise management system. ERP-class systems, implementation of information systems. Management of an implementation project of an integrated management system. Package selection process. The methodology of implementation of the ERP system. Formation of an implementation team. Time-cost schedule for an IT system implementation. The pre-implementation analysis. Identification of critical areas in the company. The determination of the increase in the amount of data in time and the determination of assumptions for the IT equipment requirements. Preparing the IT infrastructure. The selection of equipment: servers, workstations, hardware and network infrastructure. Security of the IT system: anti-virus systems, data archiving systems and anti-surge systems. Logistics in ERP systems. Customer Relationship Management (CRM) systems. Management information system. Modelling business processes and workflows in an enterprise (Workflow Management). Systems of modelling of flows of business processes in an enterprise. Administration of integrated management systems. The administration of a database server, ideas for e-commerce applications, Business-to-Business (B2B) and Business-to-Customer (B2C). Review of existing solutions in the field of E-commerce. Online stores and online payments. Virtual organizations.

Within the project, the following topics are covered:

- The entry of structural and technological data in the field of technical preparation of production,
- preparation of offers and sales orders
- production scheduling
- preparation of supply orders

Issuing documents of material circulation and registration of production operations.

## Metody kształcenia

Conventional lecture. Project.

## Efekty uczenia się i metody weryfikacji osiągania efektów uczenia się

Opis efektu	Symbol efektów	Metody weryfikacji	Forma zajęć
The student has an orderly, theoretical knowledge of computer-aided management in an enterprise.	• <a href="#">K_W09</a>	• egzamin - ustny, opisowy, testowy i inne	• Wykład

<b>Opis efektu</b>	<b>Symbol efektów</b>	<b>Metody weryfikacji</b>	<b>Forma zajęć</b>
The student has an orderly, theoretical knowledge of integrated management systems.	• <a href="#">K_W11</a>	• egzamin - ustny, opisowy, testowy i inne	• Wykład
Has an orderly, theoretical knowledge of decision support systems and knowledge management.	• <a href="#">K_W14</a>	• egzamin - ustny, opisowy, testowy i inne	• Wykład
The student is able to choose the relevant modules and use integrated management information systems.	• <a href="#">K_U12</a>	• projekt	• Projekt
The student is able to formulate and solve tasks, related to production engineering and management, applying a systemic approach while taking into account ethical, economic, legal and social aspects.	• <a href="#">K_U17</a>	• projekt	• Projekt
The student understands the importance of the non-technical aspects and effects of engineering, including their impact on the environment; the student is aware of the responsibilities resulting from decisions taken in this regard.	• <a href="#">K_K02</a>	• projekt	• Projekt
The student is able to think and act both creatively and entrepreneurially.	• <a href="#">K_K06</a>	• projekt	• Projekt

## Warunki zaliczenia

Lecture credit is awarded after passing a written exam. Project credit is awarded based on the assessment of the project presenting issues concerning data structures and models of business processes of an exemplary enterprise. Credit for project classes is awarded based on the assessment of the project related to issues of data structures and business process models presented on a sample production enterprise and performed based on a selected ERP system.
