

Modelling and Simulation of Technological Processes - opis przedmiotu

Informacje ogólne	
Nazwa przedmiotu	Modelling and Simulation of Technological Processes
Kod przedmiotu	06.1-WM-ER-MiBM-06_18
Wydział	Wydział Mechaniczny
Kierunek	WM - oferta ERASMUS
Profil	-
Rodzaj studiów	Program Erasmus
Semestr rozpoczęcia	semestr zimowy 2019/2020

Informacje o przedmiocie	
Semestr	1
Liczba punktów ECTS do zdobycia	3
Typ przedmiotu	obowiązkowy
Język nauczania	angielski
Sylabus opracował	<ul style="list-style-type: none">dr inż. Joanna Cyganiuk

Formy zajęć					
Forma zajęć	Liczba godzin w semestrze (stacjonarne)	Liczba godzin w tygodniu (stacjonarne)	Liczba godzin w semestrze (niestacjonarne)	Liczba godzin w tygodniu (niestacjonarne)	Forma zaliczenia
Wykład	30	2	-	-	Zaliczenie na ocenę
Laboratorium	30	2	-	-	Zaliczenie na ocenę

Cel przedmiotu

The aim of the course is to familiarize students with the methods of mathematical and physical modeling as well as with methods and techniques of processes simulation. To familiarize students with the options of the use of the modelling and simulation techniques for technological processes.

Wymagania wstępne

Mathematics, Physics, Mechanics and Strength of Materials, Fundamentals of Machine Design, Automated Transport and Storage, The ability to use basic computer tools,

Zakres tematyczny

The content of the lecture:

Basic concepts connected with modelling and simulation of processes: model, system, simulation, process. Model construction. Types of models and algorithms of modelling processes. Issues connected with mathematical and physical modelling and simulation of processes: data types and their collection, define parameters and variables, define a problem. Issues: apparatus of dimensional analysis, modelling with the use of dimensional functions. Methods of formalization of description of process and object. Network models. Scheduling. Practical examples of using discussed modelling methods for technological processes like: shaping products and organization processes involving with manufacturing preparation and production. Computer tools in modelling and simulation of processes.

The content of the laboratory:

Create virtual models, dimensional analysis and simulation of work of appliances used in metal working. Network models for technological processes. Scheduling - planning of working and shaping appliances for chosen products.

Metody kształcenia

Lecturers are given with the use of multimedia technics. Work with specialist literature – textbooks, professional journals.

Laboratories are given with the use of computer software – methods: problem tasks, solution analysis. Individual and group job during the realization of laboratory exercises. Presentation of solutions, discussion about obtained solutions and possibilities of its modernizations.

Efekty uczenia się i metody weryfikacji osiągnięcia efektów uczenia się

Opis efektu	Symbole efektów	Metody weryfikacji	Forma zajęć
The student can make a critical analysis of the way of functioning of processes of modeling and simulation including used in processes appliances, operations, and planning methods.		<ul style="list-style-type: none">wykonanie sprawozdań laboratoryjnych	<ul style="list-style-type: none">Laboratorium
The student is able to demonstrate the ingenuity and skill in selection of appropriate modeling and simulation methods, depending on considered problem.		<ul style="list-style-type: none">wykonanie sprawozdań laboratoryjnych	<ul style="list-style-type: none">Laboratorium

Opis efektu	Symbole efektów	Metody weryfikacji	Forma zajęć
The student has an elementary knowledge of the modelling and simulation as well as analysis of mechanical systems, appliances working and shaping material, processes manufacturing and technological designing.		<ul style="list-style-type: none"> • test końcowy 	<ul style="list-style-type: none"> • Wykład
The student is able to identify aims and priorities used for tasks set by him and others.		<ul style="list-style-type: none"> • wykonanie sprawozdań laboratoryjnych 	<ul style="list-style-type: none"> • Laboratorium
The student knows computational methods, basic tools and techniques of informatics needed in solving engineering tasks which are essential in modeling and technological processes simulation.		<ul style="list-style-type: none"> • test końcowy 	<ul style="list-style-type: none"> • Wykład
The student is able to plan and carry out computer simulations, to interpret the results and to draw conclusions.		<ul style="list-style-type: none"> • wykonanie sprawozdań laboratoryjnych 	<ul style="list-style-type: none"> • Laboratorium
The student uses modern simulation and analytical computational methods for modeling and simulation of processes like engineering problems.		<ul style="list-style-type: none"> • wykonanie sprawozdań laboratoryjnych 	<ul style="list-style-type: none"> • Laboratorium

Warunki zaliczenia

To get a credit the student has to pass all course forms.

Literatura podstawowa

1. Severance F. W., System modeling and simulation - an introduce, Wiley, West Sussex 2001,
2. Totten G. E. , Xie L., Funatani K., Modeling and simulation for material selection and mechanical design, Marcel Dekker INC, New York Basel 2004,
