

# Foundations of software modelling - course description

General information	
Course name	Foundations of software modelling
Course ID	11.3-WE-INFP-FounofSM-Er
Faculty	<a href="#">Faculty of Computer Science, Electrical Engineering and Automatics</a>
Field of study	Computer Science
Education profile	academic
Level of studies	First-cycle Erasmus programme
Beginning semester	winter term 2019/2020

Course information	
Semester	5
ECTS credits to win	6
Course type	optional
Teaching language	english
Author of syllabus	<ul style="list-style-type: none"><li>dr inż. Łukasz Hładowski</li></ul>

Classes forms					
The class form	Hours per semester (full-time)	Hours per week (full-time)	Hours per semester (part-time)	Hours per week (part-time)	Form of assignment
Lecture	30	2	-	-	Exam
Laboratory	30	2	-	-	Credit with grade
Project	15	1	-	-	Credit with grade

## Aim of the course

- obtaining basic knowledge about software modelling
- familiarizing students with practical applications of software modelling for simple software systems
- familiarizing students with proper way of practical implementation of solution to simple problems using software design patterns

## Prerequisites

Object-oriented programming, Software Engineering

## Scope

*Introductory issues.* Background and history of modern modelling techniques. Unified process of application life cycle. System analysis and design. Object paradigm. Object modelling and its role in design of information systems. Class-Responsibility-Collaboration (CRC) diagrams. Software production processes.

*Introduction to Unified Modelling Language (UML) notation and diagrams.* Genesis and purpose of UML. Structural modelling. Basic notions and elements of object architecture: classes, objects, abstractions, encapsulation, inheritance, polymorphism, communication, relations and associations between objects. Static structural diagrams: class and object diagrams. Association modelling: aggregation, composition, generalization, specialization, dependencies and realization. Packages and subsystems. Types, interfaces and implementation classes. Implementation diagrams: component and deployment diagrams. Requirements and their specification. Use case diagrams. Use case analysis: inclusion, extension, grouping and generalization. Behavioural modelling. Sequence and collaboration diagrams. Roles, messages and stimuli. Interactions and collaborations. Analysis of system states. State and activity diagrams. Flow transfer. Decisions. Concurrency. Signals and communication

*Design patterns.* Formulation of programming problems. Overview of most popular construction, structural and behavioural design patterns. Creational and testing patterns.

*Practical issues.* Work with use cases. General overview on design, deployment and testing. Presentation of dedicated UML design tools.

## Teaching methods

**lecture:** brainstorm, discussion, practical tasks, conventional lecture

**laboratory:** brainstorm, working with source files, discussion, working in groups, practical tasks, conventional lecture

**project:** brainstorm, working with source files, discussion, working in groups, practical tasks, conventional lecture

## Learning outcomes and methods of theirs verification

Outcome description	Outcome symbols	Methods of verification	The class form
Understands the need for unit tests and can implement them for simple cases. Can use simple programming tools for testing.		<ul style="list-style-type: none"><li>a project</li></ul>	<ul style="list-style-type: none"><li>Lecture</li><li>Project</li></ul>

Outcome description	Outcome symbols	Methods of verification	The class form
Can implement a fragment of simple system in chosen programming language using design patterns and proper object-oriented techniques.		<ul style="list-style-type: none"> <li>a project</li> </ul>	<ul style="list-style-type: none"> <li>Project</li> </ul>
Uses UML for description and formulation of solutions to programming problems.		<ul style="list-style-type: none"> <li>a project</li> <li>a quiz</li> <li>egzamin</li> </ul>	<ul style="list-style-type: none"> <li>Lecture</li> <li>Laboratory</li> <li>Project</li> </ul>
Can implement simple design patterns in chosen programming language. Knows disadvantages and advantages of a chosen pattern and can propose alternative solution.		<ul style="list-style-type: none"> <li>a project</li> <li>a quiz</li> <li>an examination test with score scale</li> </ul>	<ul style="list-style-type: none"> <li>Lecture</li> <li>Laboratory</li> <li>Project</li> </ul>
Can notice and describe advantages and disadvantages of proposed solution during the UML modelling phase.		<ul style="list-style-type: none"> <li>a project</li> </ul>	<ul style="list-style-type: none"> <li>Project</li> </ul>
Knows, understands and uses simple rules for software engineering.		<ul style="list-style-type: none"> <li>a project</li> <li>a quiz</li> <li>an examination test with score scale</li> </ul>	<ul style="list-style-type: none"> <li>Lecture</li> <li>Laboratory</li> <li>Project</li> </ul>
Can choose proper tools for software engineering.		<ul style="list-style-type: none"> <li>a quiz</li> <li>an ongoing monitoring during classes</li> </ul>	<ul style="list-style-type: none"> <li>Laboratory</li> </ul>
Can notice and describe advantages and disadvantages of the proposed solution by source code analysis. Can refactor simple code.		<ul style="list-style-type: none"> <li>a project</li> </ul>	<ul style="list-style-type: none"> <li>Lecture</li> <li>Project</li> </ul>

## Assignment conditions

**Lecture** - a credit is given for obtaining a passing grade for all exams administered at least once per semester

**Laboratory** - to receive a final passing grade student has to receive passing grades for all tasks required by the curriculum.

**Project** - to receive a final passing grade student has to receive passing grades for all tasks and projects required by the curriculum..

**Calculation of the final grade** = lecture: 40% + laboratory: 20% + project: 40%
