

# Digital media and game development - course description

General information	
Course name	Digital media and game development
Course ID	11.3-WE-INF-D-MaGD-Er
Faculty	<a href="#">Faculty of Computer Science, Electrical Engineering and Automatics</a>
Field of study	Computer Science
Education profile	academic
Level of studies	Second-cycle Erasmus programme
Beginning semester	winter term 2021/2022

Course information	
Semester	2
ECTS credits to win	5
Course type	obligatory
Teaching language	english
Author of syllabus	<ul style="list-style-type: none"><li>dr hab. inż. Marek Sawerwain, prof. UZ</li></ul>

Classes forms					
The class form	Hours per semester (full-time)	Hours per week (full-time)	Hours per semester (part-time)	Hours per week (part-time)	Form of assignment
Lecture	15	1	-	-	Credit with grade
Laboratory	30	2	-	-	Credit with grade
Project	15	1	-	-	Credit with grade

## Aim of the course

- To familiarize students with the design and production of computer games or digital media.
- Presentation of the requirements of the electronic entertainment industry.
- Shaping basic skills in preparing for work as a game designer or digital media creator.

## Prerequisites

Computer Graphics, 3D Games Programming

## Scope

Game study. History of video games. Types and categories of video games. Game evaluation in terms of technology, narration, playability, interaction and aesthetics.

Digital media study. Computer animations and special effects. Digital media evaluation in terms of technology, narration and aesthetics.

Game design theory. Principles and methodology of game production. Game concept (mechanics, game rules, world modeling). Game economy (simulations, rules of play, "rewards and punishments" for a player, complexity of the game, interaction and player experience building).

Digital Storytelling. Linear and nonlinear narration. Scripts and screenplays. Principles of digital drama. Build of character.

Game programming. Physics and games. Environment for game development. Data representations (component oriented model, ECS pattern). Artificial Intelligence of non playable characters (NPC).

Game Assets. Design of computer game components or computer animation. Designing a soundtrack and sound elements.

Level Design. Designing virtual worlds - the level of the game or the scenography of film/animation.

Document Creation. Development of a document containing the concept of game/animation, scenario, asset description and illustrations, scenography description and illustrations, description of selected project environment, description of data format and code components, user demography, comparison with similar games.

Game creations/Films production. Developing of a prototype game or multimedia application. Evaluation of the prototype.

## Teaching methods

Lecture: conventional lecture

Laboratory: laboratory exercises, group work

Project: project method, discussions and presentations

## Learning outcomes and methods of theirs verification

Outcome description	Outcome symbols	Methods of verification	The class form
---------------------	-----------------	-------------------------	----------------

Outcome description	Outcomesymbols	Methods of verification	The class form
Can design and implement a multimedia application capable to working in a variety of hardware and software environments.		<ul style="list-style-type: none"> <li>• a test with score scale</li> <li>• an observation and evaluation of activities during the classes</li> </ul>	<ul style="list-style-type: none"> <li>• Laboratory</li> </ul>
Student is able to work in a team which are working on multimedia project.		<ul style="list-style-type: none"> <li>• a test with score scale</li> <li>• an observation and evaluation of activities during the classes</li> </ul>	<ul style="list-style-type: none"> <li>• Laboratory</li> <li>• Project</li> </ul>
Student has knowledge of the principles of game design and digital media.		<ul style="list-style-type: none"> <li>• a test with score scale</li> </ul>	<ul style="list-style-type: none"> <li>• Lecture</li> </ul>
Knows main notions of 3D graphics and digital media.		<ul style="list-style-type: none"> <li>• a test with score scale</li> </ul>	<ul style="list-style-type: none"> <li>• Lecture</li> </ul>
Can design application with 3D graphics and digital media.		<ul style="list-style-type: none"> <li>• a test with score scale</li> <li>• an observation and evaluation of activities during the classes</li> </ul>	<ul style="list-style-type: none"> <li>• Laboratory</li> </ul>
Student is aware of the dynamic development of methods of computer graphics and media.		<ul style="list-style-type: none"> <li>• a test with score scale</li> </ul>	<ul style="list-style-type: none"> <li>• Lecture</li> </ul>
Can present a documentation or scenario for a multimedia application or digital film.		<ul style="list-style-type: none"> <li>• a project</li> <li>• pisemne sprawozdanie z projektu</li> </ul>	<ul style="list-style-type: none"> <li>• Project</li> </ul>
Student can creatively use the available tools for designing applications with 3D graphics and media		<ul style="list-style-type: none"> <li>• a test with score scale</li> <li>• an observation and evaluation of activities during the classes</li> </ul>	<ul style="list-style-type: none"> <li>• Laboratory</li> </ul>
Determines the priorities of the realised project		<ul style="list-style-type: none"> <li>• a test with score scale</li> <li>• an observation and evaluation of activities during the classes</li> </ul>	<ul style="list-style-type: none"> <li>• Laboratory</li> <li>• Project</li> </ul>

## Assignment conditions

Lecture - obtaining a positive grade in written exam.

Laboratory - the main condition to get a pass are sufficient marks for all exercises and tests conducted during the semester.

Project - a condition of pass is to obtain positive marks from all project tasks and preparation written report of project.

Calculation of the final grade: = lecture 40% + laboratory 30% + project 30%.
