

System modelling and identification - opis przedmiotu

Informacje ogólne	
Nazwa przedmiotu	System modelling and identification
Kod przedmiotu	11.9-WE-AutD-SysModeliIdentyf.-Er
Wydział	Wydział Informatyki, Elektrotechniki i Automatyki
Kierunek	Automatyka i robotyka / Komputerowe Systemy Automatyki
Profil	ogólnoakademicki
Rodzaj studiów	Program Erasmus drugiego stopnia
Semestr rozpoczęcia	semestr zimowy 2022/2023

Informacje o przedmiocie	
Semestr	1
Liczba punktów ECTS do zdobycia	4
Typ przedmiotu	obowiązkowy
Język nauczania	angielski
Sylabus opracował	dr hab. inż. Andrzej Janczak, prof. UZ

Formy zajęć					
Forma zajęć	Liczba godzin w semestrze (stacjonarne)	Liczba godzin w tygodniu (stacjonarne)	Liczba godzin w semestrze (niestacjonarne)	Liczba godzin w tygodniu (niestacjonarne)	Forma zaliczenia
Wykład	30	2	-	-	Egzamin
Laboratorium	30	2	-	-	Zaliczenie na ocenę

Cel przedmiotu

To provide fundamental knowledge in system identification, including: input signal selection, model order selection, non-recursive and recursive identification methods.

To develop skills in building system models based on structure knowledge and input-output measurements, including nonparametric identification methods, parametric identification methods, neural networks and fuzzy models.

Wymagania wstępne

Signals and dynamic systems, Control engineering, Artificial intelligence methods

Zakres tematyczny

Introduction. Plants and their models. Model using. System identification and mathematical modelling. Equivalence of models and model equivalence criteria. Parameter estimation. Identifications error definitions. Building system models based on structure knowledge and measurements. Identification algorithm scheme.

Nonparametric identification methods. Transient states analysis. Frequency identification methods. Correlation methods. Power spectrum analysis.

Least squares method. Linear static models. Least squares problem. Normal equations. Analysis of least squares estimator. Best linear unbiased estimator. Confidence intervals of parameter estimates. Model complexity. Finding the least squares solution with orthogonal-triangular decomposition. Recursive least squares algorithm.

Models of dynamic systems. Model classification. General structure of linear model. AR, AR, MA, ARMA, FIR, ARX, ARMAX, OE, and Box-Jenkins models. Multi-input multi-output models. Nonlinear models. Wiener and Hammerstein models. Volterra and Kolmogorov-Gabor models. State-space models. Model structure selection.

Input signals. Deterministic signals. Stochastic signals. Input signals used in system identification. Persistent excitation condition.

Prediction error method. Simulation and prediction. Optimal predictors. Least-squares estimation of ARX model parameters. Parameter consistency problem. Instrumental variables method. Choice of instrumental variables. Prediction error method.

Recursive identification. Properties of recursive identification algorithms. Recursive least squares method. Exponential forgetting. Recursive instrumental variables method. Recursive prediction error method. Parameter adaptation of self-tuning controller.

Closed-loop identification. Identifiability of closed-loop systems. Direct identification methods. Indirect identification methods. Influence of feedback loop on estimation accuracy.

Subspace identification methods. Deterministic and stochastic state-space models. Deterministic system identification. Stochastic system identification.

Metody kształcenia

Lecture, laboratory exercises.

Efekty uczenia się i metody weryfikacji osiągnięcia efektów uczenia się

Opis efektu	Symbolne efektów	Metody weryfikacji	Forma zajęć
-------------	------------------	--------------------	-------------

Opis efektu	Symbol e efektów	Metody weryfikacji	Forma zajęć
Can construct models of linear dynamical systems using the prediction error method		• test	• Wykład • Laboratorium
Can construct models of linear systems using the least squares method		• test	• Wykład • Laboratorium
Knows definitions of systems identification, mathematical modeling and general system identification algorithm		• test	• Wykład • Laboratorium
Knows principles of linear dynamical system identification using predication error method		• test	• Wykład • Laboratorium
Can construct models of linear dynamical systems using the transient response analysis		• test	• Wykład • Laboratorium
Knows principles of linear dynamical system identification with recurrent methods		• test	• Wykład • Laboratorium
Knows principles of linear dynamical system identification with instrumental variables method		• test	• Wykład • Laboratorium
Can construct models of dynamical linear systems using the instrumental variables method		• test	• Wykład • Laboratorium
Knows linear dynamical systems classification, general model structure, AR, MA, ARMA, FIR, ARX, ARMAX, OE and Box- Jenkins models		• test	• Wykład • Laboratorium
Knows principles of linear dynamical system identification using least squares method		• test	• Wykład • Laboratorium

Warunki zaliczenia

Lecture – the main condition to get a pass are sufficient marks in written or oral tests conducted at least once per semester.

Laboratory – the passing condition is to obtain positive marks from all laboratory exercises to be planned during the semester.

Calculation of the final grade: lecture 50% + laboratory 50%
