

Digital signal processing - opis przedmiotu

Informacje ogólne	
Nazwa przedmiotu	Digital signal processing
Kod przedmiotu	11.9-WE-INF-DigSignProc-Er
Wydział	Wydział Informatyki, Elektrotechniki i Automatyki
Kierunek	Informatyka
Profil	ogólnoakademicki
Rodzaj studiów	Program Erasmus
Semestr rozpoczęcia	semestr zimowy 2017/2018

Informacje o przedmiocie	
Semestr	2
Liczba punktów ECTS do zdobycia	6
Typ przedmiotu	obowiązkowy
Język nauczania	angielski
Sylabus opracował	dr inż. Mirosław Kozioł

Formy zajęć					
Forma zajęć	Liczba godzin w semestrze (stacjonarne)	Liczba godzin w tygodniu (stacjonarne)	Liczba godzin w semestrze (niestacjonarne)	Liczba godzin w tygodniu (niestacjonarne)	Forma zaliczenia
Wykład	30	2	-	-	Egzamin
Laboratorium	30	2	-	-	Zaliczenie na ocenę

Cel przedmiotu

- To familiarize students with basic notions of digital signal processing.
- To provide basic knowledge about fundamentals of spectral analysis and digital filtration of discrete signals.
- To familiarize students with the formal description of discrete systems.
- To give skills in practical implementation of spectral analysis and filtration of discrete signals in the form of a computer program.

Wymagania wstępne

Fundamentals of programming in ANSI C.

Zakres tematyczny

Fundamentals of signal theory. Notion of signal. Classifications of signals. Mathematical models of selected signals. Fourier series and Fourier transform for continuous time signals. Fourier series and Fourier transform properties. An influence of a signal observation in finite time interval on its spectrum.

Analog-to-digital and digital-to-analog conversion. Chain of signal processing during analog-to-digital and digital-to-analog conversion. Sampling, quantization and coding. Quantization error. Spectrum of a sampled signal. Aliasing. Sampling theorem. Anti-aliasing filter. Recovery of an analog signal from samples.

Discrete Fourier transform (DFT). Derivation of amplitude and phase spectrum. Leakage. Parametric and non-parametric spectral windows. Spectrum resolution improvement by zero padding. Examples of spectral analysis of discrete-time signals and their interpretation.

Fast Fourier transform (FFT). Butterfly computation schema in radix-2 FFT algorithm. Computational profit. Computation of inverse DFT using FFT.

Linear and causal time-invariant (LTI) systems. Definitions of discrete, linear and time-invariant system. Convolution. Stability of LTI systems in BIBO sense. Definition of causal system. Difference equation.

Z-transform. The Z-transform definition. Region of convergence of Z-transform. The inverse Z-transform and methods of its determination. Z-transform properties. The transfer function. Poles and zeros of transfer function. Pole locus and stability of system.

Digital filters. Finite and infinite impulse response filters. Processing discrete-time signals by digital filters. Basic structures of digital filters. Determination and interpretation of the frequency response of digital filters. Significance of linear phase response in the processing of signal. Group delay.

Digital filter design. IIR digital filter design by bilinear transformation method. FIR digital filter design by method based on the windowed Fourier series.

Metody kształcenia

- Lecture: conventional/traditional lecture with elements of discussion.
- Laboratory: laboratory exercises, work in groups with elements of discussion.

Efekty uczenia się i metody weryfikacji osiągnięcia efektów uczenia się

Opis efektu	Symbole efektów	Metody weryfikacji	Forma zajęć

Opis efektu	Symbole efektów	Metody weryfikacji	Forma zajęć
Student can write programs in C language, which make spectral analysis of signals and their filtering with the application of digital filters with finite and infinite impulse response.		• bieżąca kontrola na zajęciach	• Laboratorium
Student knows basic notions of digital signal processing.		• egzamin - ustny, opisowy, testowy i inne	• Wykład
Student can describe a discrete system using differential equations and transmittance.		• egzamin - ustny, opisowy, testowy i inne	• Wykład
Student can use digital signal processing to analyze discrete signals, perform its spectral analysis, and interpret the obtained graphs of spectra.		• bieżąca kontrola na zajęciach • egzamin - ustny, opisowy, testowy i inne	• Wykład • Laboratorium

Warunki zaliczenia

- Lecture: to receive a final passing grade student has to receive positive grade from the final test.
- Laboratory: to receive a final passing grade student has to receive positive grades in all laboratory exercises provided for in the laboratory syllabus.

Calculation of the final grade = lecture 45% + laboratory 55%
