# 3D games programming - opis przedmiotu

Informacje ogolne	
Nazwa przedmiotu	3D games programming
Kod przedmiotu	11.2-WE-INFP-ProgramG3D-Er
Wydział	Wydział Nauk Inżynieryjno-Technicznych
Kierunek	Informatyka
Profil	ogólnoakademicki
Rodzaj studiów	Program Erasmus
Semestr rozpoczęcia	semestr zimowy 2017/2018

#### Informacje o przedmiocie Semestr 5 Liczba punktów ECTS do zdobycia 6 Typ przedmiotu obieralny Język nauczania angielski Sylabus opracował • dr hab. inż. Marek Sawerwain, prof. UZ

#### Formy zajęć Forma zaliczenia Forma zajęć Liczba godzin w semestrze Liczba godzin w tygodniu Liczba godzin w semestrze Liczba godzin w tygodniu (stacjonarne) (stacjonarne) (niestacjonarne) (niestacjonarne) Wykład 30 2 -Egzamin -Laboratorium 30 2 Zaliczenie na \_ ocenę Projekt 15 1 \_ Zaliczenie na ocene

### Cel przedmiotu

- to familiarize students with the capabilities of 3D game programming environments, including the most popular development environments designed for game programming developing,
- shaping the basic skills of 3d game programing and create awareness of main notions used in modern 3d game systems.

### Wymagania wstępne

Computer graphics, Object oriented programming

### Zakres tematyczny

A brief overview of the main stages in the history of computer game development. Especially highlighting the development of 3D interactive graphics.

Existing systems and environments for 3D game programming. Examples of applications/packages supporting the development of applications with interactive 3D graphics.

Interactive computer 3D graphics. Geometric modelling, transformation and navigation in 3D space. Virtual reality as interactive 3D environment. Representation of 3D space. Construction and placement basic 3D elements. Methods of modifying of 3d objects. Representation of 3D objects -- shading and lighting. Mesh construction. Terrain component.

Animation and interactions in 3D game environment. Movement keying, simulation of move based on physics models. System of collision detection. Animation of position, rotating and scale. Interaction of user.

Tools supports of 3D game developing and programming. Performance of real-time applications. Techniques of 3d graphics scene optimization like occlusion culling, level of details. Scripting in 3D game systems.

Selected aspects of networking in 3D games. Server and client creation. Overview of basic algorithms for synchronizing position of player in a 3D environment across the network.

#### Metody kształcenia

Lecture: conventional lecture Laboratory: laboratory exercises, group work Project: project method, discussions and presentations

### Efekty uczenia się i metody weryfikacji osiągania efektów uczenia się

Opis efektu

Symbole efektów Metody weryfikacji

Opis efektu	Symbole efektów Metody weryfikacji	Forma zajęć
Can prepare a sample or prototype of computer game in selected development environment	• projekt	• Projekt
Can use advanced features of programming and developing tools for creation of a game with 3D graphics	<ul> <li>obserwacja i ocena aktywności zajęciach</li> <li>sprawdzian z progami punktowy</li> </ul>	na • Laboratorium /mi
Student can evaluate of a 3D game application (criticise its contents, technical quality and evaluate the method of its preparing).	<ul> <li>sprawdzian z progami punktowy</li> </ul>	vmi • Wykład
Student is able to plan and carry out multi-stage work schedule of 3D game project.	e • sprawdzian z progami punktowy	ymi • Wykład

## Warunki zaliczenia

Lecture - obtaining a positive grade in written exam.

Laboratory - the main condition to get a pass are sufficient marks for all exercises and tests conducted during the semester. Project - a condition of pass is to obtain positive marks from all project tasks and preparation written report of project. Calculation of the final grade: = lecture 30% + laboratory 30% + project 40%.
